

Bayer CropScience plant protection agents

Bayer CropScience is a leader on the world market in production of plant protection agents, with over 150 years long tradition.

Since the founding in 1863, Bayer has been known as the greatest innovator because it represents and establishes new standards on the world market in the segment of plant protection in agricultural production.

One of the main goals of Bayer is investing in researches and new technologies that are directed towards finding sustainable solutions in agricultural crop protection.

Bayer products, besides being highly efficient, are also characterized by being safe, both for the producer and for the environment and final users.

Bayer offers high quality agents in the form of fungicides, herbicides, insecticides and products for vegetable seeds treatment, and it can be easily said that there isn't a segment of agricultural production where Bayer agent aren't applicable.

Precisely for that, Bayer products are successfully used in field crops, fruit, vegetable and flower protection from weeds, diseases and pests.
