

Timac Agro plant nutrition agents

Liquid foliar fertilizers and compact complex mineral fertilizers

Timac Agro Balkans doo represents branch office of the French firm Roullier founded in Serbia in 2007. Main occupation of the firm is production and distribution of mineral fertilizers. Professional approach of agronomy experts, together with partnership approach of our distributors, guarantees secure production from the aspect of plant nutrition. The goal of agricultural production is maximal usage of seed genetic potential considering field crops as well as vegetable cultures, where plant nutrition has very important role.

Compact complex mineral fertilizers EUROFERTIL are produced in Timac Agro Dungemittel plants in Pischesldorf (Austria) and are transported to Serbia by river or by road. They are available in packages of 50 kg and 600 kg for users of specialized and regular compact complex fertilizers. The content of elementary NPK and microelements in different proportions represent the answer to the needs of particular plants, so the specter consists of more than 60 formulations (NPK, NP, N, PK).

Besides regular fertilizers, we also offer FERTILEADER and FERTIACTYL liquid foliar fertilizers with high content of microelements whose function is improvement of plant juices flow, enhancement of growth, early growing, better fertilization and anti-stress effects caused by showers, drought, harmful pesticides affecting...
